Cities is a fairly large mod, with the total size being about 15 gigabytes, but that's still only about 25 megabytes per city. From the descriptions below, you'll see that they are laid out very differently from ProMods . Each city is entirely self-contained, so don't expect more than three cities out of this mod, even if you have hundreds more. You'll have to download this in pieces as each city is at least 700 megabytes, and sometimes more. The Cities is the most popular mod on ProMods . The cities are designed to be as similar to real cities as possible, but have a few quirks that make them unique to this mod. This article is split into 3 sections. In this section we'll discuss the major differences between the cities that are designed to make your job easier. It's not required to read this section to play with the cities, but it's something that new users of this mod are often interested in. If you're not interested in the technical details, then you can skip this section entirely. Cities is designed to allow you to create your own cities without having to make a lot of tedious changes to a giant list of cities. This is the reason why there are so many files, and the files are so large. However, if you're using this mod, then this section is all about using the features of this mod. It's what makes the mod special. In a regular ProMods mod, it is up to the user to provide the script for the city they want. That means that new cities have to be created each time a new version of the mod comes out. With this mod, if I need a city, it's already there. I don't need to create it. If you're just interested in playing with the mod, you don't need to read this section. The Cities is a very big mod, and contains a lot of information. The cities have their own article that can explain how to install the cities. Once you have installed them, you'll need to read this article to get up to speed with the cities. The Cities adds a new section to the Loading Screen which displays a list of cities that are available for you to play with. You can also display a map of the available cities. If you're just playing with the Cities without installing the cities, you can ignore this section. The Cities mod allows you to edit your own cities
