Digital product serial number is a string of numeric digits that uniquely identifies a product, usually serial number of a computer, mobile phone or any kind of digital product. Digital product serial number may be either 13 digits long for most

computers or alphanumeric string for mobile phones. Although the digital product serial number contains a sequence of digits, the true representation of the digital product serial number has a unique structure that specifies the origin and history of the product. The IKM products such as AmpliTube 2, Masterverb, JH Audio were released before the implementation of digital serial numbers. And because of the digital serial number did not exist for the release of these products and as a result of this has been found that AmpliTube 2, JH Audio, Metal and Ampeg SVX UNO are compromised by the manufacturer (IKM) in both the Firmware and the Database. The true IKM original data has been protected with a digital signature by the manufacturer (IKM) and is not accessible and encrypted (in secret) by IKM. Also, IKM cannot change the digital product serial number without the authorization of the manufacturer. However, IKM was able to remove the digital signature and to create a new digital serial number for the IKM products. The removal of the digital signature by IKM can be easily detected by comparing the true digital product serial number before and after the digital signature removal. IKM Digital Signature Removal and New digital serial number creation is a violation of the license agreement. Therefore, the digital signature removal and the new serial number creation can be considered a deception and fraud by IKM. Note: In addition to the digital signature, the original data (in the binary form) is also present in the database for the IKM products AmpliTube 2, JH Audio, Metal and Ampeg SVX UNO.

However, IKM can remove this data and can provide the data (the true digital product serial number) as a copy from the database. How to identify the fraudulent software and unauthorized data is already included in the license agreement and the user manual. How to obtain the true digital product serial number is already included in the license agreement and the user manual. The digital serial number does not include any personal data or contact information. The genuine digital serial number is unique and cannot be re-created. The digital serial number can only be removed by the authorized 2d92ce491b
